

DSV2-080

Normally-Open, Two-Way, Two-Position, Poppet-Type Cartridge Solenoid Valve

DESCRIPTION

A cartridge valve designed with positive shut off, low leakage, to be used in load holding applications.

OPERATION

When de-energized, the DSV2-080 poppet is open to allow flow from ② to ①.

When energized, the poppet closes to block flow from ② to ①. In this condition, the cartridge allows reverse flow from ① to ② after overcoming the solenoid force of 75 PSI (5 Bar).
